

# What's the difference between System & Soul™ and EOS®?

System & Soul is the only business framework built on the humanity of the organization.

All of the best operating systems pull from the same tools and principles—proven, timeless wisdom that's served companies well for decades.

What they're often missing is the emphasis on the soul.

The soul component helps a company get intentional about the culture, people, and identity that give the business a competitive advantage.
